Harmonised Index of Consumer Prices (HICP)
November 2013

Monthly deflation in November was -0.6%

Monthly deflation measured by Harmonised Index of Consumer Prices was -0.6% in November. This was influenced mostly by the decrease in prices of: bread and cereals; fruit; accommdation services; vegetables; hairdressing salons and personal grooming establishments etc.

When observing the main groups, monthly drop of prices was noticed in the following groups: Food and non-alcoholic beverages (-1.3%); Miscellaneous goods and service (-1.3%); Restaurants and Hotels (-1.0%); Recreation and culture (-0.5%); Furnishing, household equipment and routine household maintenance (-0.3%); Alcoholic beverages and tobacco (-0.1%); Communications (-0.1%), while a growth of prices was recorded in groups: Clothing and footwear (+0.4%); Housing, water, electricity, gas and other fuels (+0.1%).

Positive annual inflation rates in November were observed in the following groups: Alcoholic beverages and tobacco (+7.4%); Housing, water, electricity, gas and other fuels (+3.2%); Miscellaneous goods and services (+2.9%); Health (+1.5%); Restaurants and Hotels (+0.7%); Education (+0.2%), while negative annual inflation rates were observed in the following groups: Transport (-2.2%); Recreation and culture (-1.5%); Food and non-alcoholic beverages (-1.0%); Furnishing, household equipment and routine household maintenance (-0.7%); Communications (-0.4%); Clothing and footwear (-0.3%).

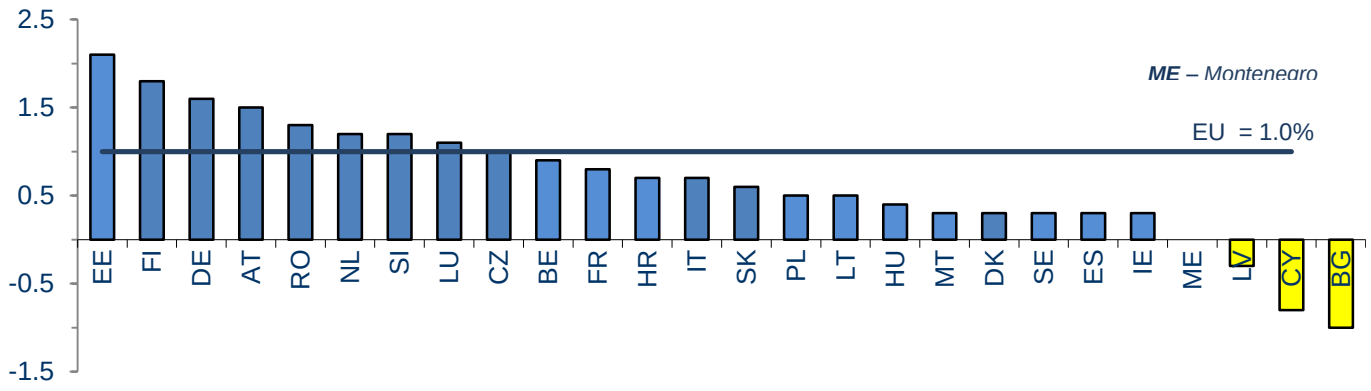
Chart 3. Annual inflation rate measured by HICP, November 2013



EU annual inflation was 1.0% in November 2013, while Euro area annual inflation was 0.9%.

Harmonised Index of Consumer Prices (HICP) is the basis for comparative measurement of inflation in the European Union, and it estimates a monetary value in the Eurozone. As a difference to Consumer Index Index Price (CPI), it uses different methodological concept which is used by all EU members.

Nov 2013 month of the current year
Ø 2010 average of base year

This rate indicates a change in average prices in current month when compared with average prices in previous year.

Nov 2013 current month
Oct 2013 previous month

Monthly inflation rate (current month compared with previous month) measures a change of average prices of current months compared with average prices of previous month. Monthly inlfation rate can be under the influence of seasonal effects.

Nov 2013 month of the current year
Nov 2012 the same month of previous year

Annual inflation rate (month of the current year compared with the same month of previous year) measures a change in average prices in current month compared with average prices in the same month of previous year.

Nov 2013 current month
Dec 2012 december previous year

This rate indicates a change in average prices in year 2012 compared with average prices in 2011 year.

The influence of certain subgroups on inflation rate indicates how much that subgroup has influenced on the total inflation rate. The influence depends on weights and inflation rate of given subgroup. The weights represents a relative share of household consumption of certain groups or subgroup of products in the total consumption. Consequently, weights have an important role in the calculation of inflation rate. They represent "importance" of certain product group in the total household consumption in certain reference period. For example, if during certain month prices of bread increases for 10%, this will influence for approx. 0.5% (10*5%=0.5% - since the share of bread in the total expenses is 5%). But, if the prices of medicaments increase 12%, this will increase the inflation for 0.06% (12*0.5%=0.06% - since the share of medicaments in the total expenses 0.5%). This simple example indicates how much large influence have weights on the final number presenting the inflation.
