METHODOLOGICAL NOTES

The presented data are collected through a survey on construction activity (GRADJ-31). The survey is conducted on a sample basis. The frame for a sample is enterprises with 5 and more employees who are in the Statistical Business register according to the Classification of activities classified in sector F – Construction, as well as companies (KAU) whose business units engaged in construction works. Survey covers all large and medium enterprises (class 2 and 3), while small enterprises (class 1) are selected by a random simple sample. The survey results are extrapolated to the total population using appropriate weights and represent data for Montenegro.

The value of finalised construction works includes: material costs, labour costs, demolition and preparation of the field, installation costs, and general costs. The value does not include expenses of buying the land, engineering, monitoring, and VAT. The data on the value of finalised construction work refer to works performed in the reporting period on finished and unfinished constructions. The value of finalised construction works is expressed in current prices.

Effective hours worked represent hours actually worked by workers engaged at the construction sites during regular working hours, as well as overtime work.

Data are published according to the Statistical Release Calendar.

According to the Revision policy of the Statistical Office, the final data shall be published with the date defined by the Statistical Release Calendar.

When using the data, state:
"Data source: Statistical Office - MONSTAT"
