METHODOLOGICAL NOTES

Internal trade statistics covers and presents turnover of enterprises with the retail trade as their main activity.

The survey is conducted on the basis of a sample and includes companies that are registered in Area 47 according to the Classification of Activities (KD 2010). As an additional source is also used - VAT returns received from the Tax Administration.

Turnover of goods in retail trade represents the value of goods of enterprises sold to final consumers, i.e. population for personal consumption and household use as well as to legal and natural persons for performing industries.

Indices of turnover of goods in constant prices are received by deflating index in current prices by appropriate indices of retail goods prices.

Data are published according Statistical Release Calendar.

According to the Revision policy of the Statistical Office, the final data shall be published with the date defined by the Statistical Release Calendar.
