## METHODOLOGICAL NOTES

The aim of the survey is to measure the dynamics of turnover in service activities. The dynamics of turnover are shown through index numbers.

The turnover covers the monetary value of performed and rendered services on the market in the reporting quarter. The value-added tax is excluded from the turnover.

The source of data for the implementation of the Turnover index in services survey is turnover data from VAT returns (jurisdiction of the Tax Administration) on day 24 July 2024.

The coverage is based on the EU Regulation 2019/2152 for short-term statistics and on its amendments. The survey aligns with the concepts and definitions from the mentioned Regulation. Total turnover in service activities includes turnover from the list of activities provided in Table 2, and it covers all companies in Montenegro that have reported VAT registration to the Revenue and Customs Administration.

Data are published according to the [Statistical Release Calendar](#).

The last published data are considered preliminary, and become final within the defined deadline, as foreseen by the Statistical Release Calendar.
