

## Harmonised Index of Consumer Prices (HICP) April 2012

**Monthly inflation in April increased +0.7%, while the annual inflation is 2.9%**

Monthly inflation measured by Harmonised Index of Consumer Prices increased +0.7% in April. This was influenced mostly by the increase in prices of fuels and lubricants for personal transport equipment, fruit, mineral waters, soft drinks, fruit and vegetable juices. Annual inflation in April is +2.9%, and it is higher than in March, when it was +2.1%.

When observing the main groups, monthly growth of prices was noticed in the following groups: Transport (+1.5%); Food and non-alcoholic beverages (+1.4%); Alcoholic beverages and tobacco (+0.6%); Furnishing, household equipment and routine household maintenance (0.6%); Health (+0.3%); Communications (+0.2%); Restaurants and Hotels (+0.2%); Clothing and footwear (+0.1%); Housing, water, electricity, gas and other fuels (+0.1%); while a decrease in prices is recorded in groups: Miscellaneous goods and services (-1.5%); Recreation and culture (-0.5%). Prices in the group Education remain at the same level as in the previous month.

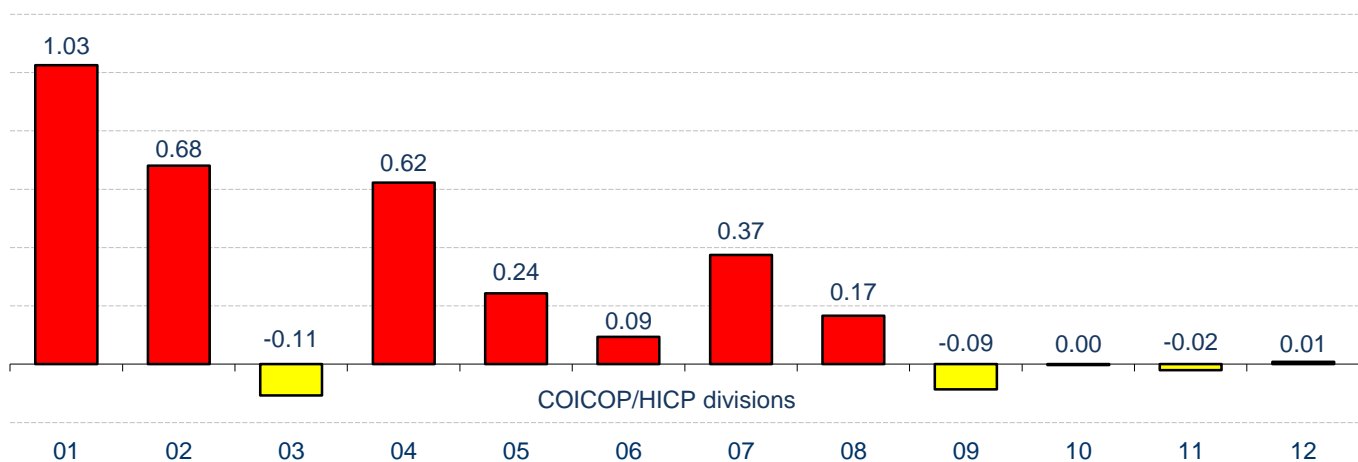

Positive annual inflation rates in April were observed in the following groups: Alcoholic beverages and tobacco (+15.1%); Housing, water, electricity, gas and other fuels (+8.9%); Health (+4.1%); Food and non-alcoholic beverages (+3.3%); Communications (+2.9%); Transport (+2.8%); Furnishing, household equipment and routine household maintenance (+2.1%); Miscellaneous goods and services (+0.3%); while negative annual inflation rates were observed in the following groups: Clothing and footwear (-2.2%); Recreation and culture (-1.7%); Education (-0.3%); Restaurants and Hotels (-0.2%).

**Graph 3. Annual inflation rate measured by HICP, March 2012**

Montenegro annual inflation was 2.9% in April 2012. EU annual inflation was 2.9% in March 2012, while there was 2.7% in the Euro area.

**Harmonised Index of Consumer Prices (HICP)** is the basis for comparative measurement of inflation in the European Union, and it estimates a monetary value in the Eurozone. As a difference to Consumer Index Price (CPI), it uses different methodological concept which is used by all EU members.

**Apr 2012 month of the current year**

**Ø 2010 average (Ø) month of previous year**

This rate indicates a change in average prices in current month when compared with average prices in previous year.

**Apr 2012 current month**

**Mar 2012 previous month**

**Monthly inflation rate** (current month compared with previous month) measures a change of average prices of current months compared with average prices of previous month. Monthly inflation rate can be under the influence of seasonal effects.

**Apr 2012 month of the current year**

**Apr 2011 the same month of previous year**

**Annual inflation rate** (month of the current year compared with the same month of previous year) measures a change in average prices in current month compared with average prices in the same month of previous year.

**Apr 2012 month of the current year**

**Dec 2011 december of previous year**

This rate indicates a change in average prices in current month compared with average prices in December of previous year.

**The influence of certain subgroups on inflation rate** indicates how much that subgroup has influenced on the total inflation rate. The influence depends on weights and inflation rate of given subgroup. The weights represents a relative share of household consumption of certain groups or subgroup of products in the total consumption. Consequently, weights have an important role in the calculation of inflation rate. They represent "importance" of certain product group in the total household consumption in certain reference period. For example, if during certain month prices of bread increases for 10%, this will influence for approx. 0.5% ( $10 \times 5\% = 0.5\%$  - since the share of bread in the total expenses is 5%). But, if the prices of medicaments increase 12%, this will increase the inflation for 0.06% ( $12 \times 0.5\% = 0.06\%$  - since the share of medicaments in the total expenses 0.5%). This simple example indicates how much large influence have weights on the final number presenting the inflation.
