NON-DURABLE CONSUMER GOODS	99.8	100.1	99.6	99.7

METHODOLOGICAL NOTES

The purpose of statistics on import price indices is to collect the data on monthly price changes of industrial products from the import. Purchase price of industrial products from import is the price of a good delivered at the frontier of the importing country, including transportation costs, insurance charges, and any other costs incurred to that point (CIF price) that influence on the unit price of a product.

Price indices of industrial products from the import represent important economic indicators which can be used as an inflation measure, as time series deflators, especially for needs of national accounts and as an instrument for harmonising prices when different purchase and sale contracts are concluded.

This survey includes companies - importers of industrial products covered by sections of mining and quarrying and manufacturing of the NACE Rev. 2 classification, with more than five employees that meet the unit of measurement prescribed by the Nomenclature of industrial products per unit of product. The sample and weights are based on foreign trade statistics. The sample is determined by three criteria: selection of products with significant import values; selection of enterprises importing these selected products, selection of representative items in cooperation with the reporting units.

Data are published according [Statistical Release Calendar](#).

The last published data are considered **preliminary**, and becomes final within the defined deadline, as foreseen by the Statistical Release Calendar.

Special aggregates:

Energy – Includes activities of extraction, production, processing and distribution of energy.

Intermediate goods – Include products that are final product of manufacturing process, but can also be used as an input to other production processes.

Capital goods – Include heavy equipment which require relatively large investments, and are purchased for use over a long period of time.

Durable consumer goods – Include products for the mass market and are intended to last for several years.

Non-durable consumer goods – Include products for mass consumption, purchased by consumers for daily or frequent use.

Since January 2018, the index reference period for the calculation of Price indices of industrial products from import is 2015=100. This methodological change is at the same time a request from Eurostat, and it refers to all short-term statistics.
