

Indices of physical volume of publicly owned forest assortments production January 2014

Production of forest assortments from state forests in Montenegro in January 2014 compared to January 2013, increased 111.1 %.

Production of broadleaf logs from state forests in Montenegro in January 2014 compared to January 2013 increased for 731 m³.

Production of hardwoods publicly owned in Montenegro in January 2014 compared to January 2013 increased for 1051 m³

Production of cord coniferous wood publicly owned in Montenegro in January 2014 compared to January 2013 has been decreased for 357 m³.

Production of fuel wood of hardwoods publicly owned in Montenegro for period in January 2014 compared to January 2013 has been increased for 337 m³.

Indices of physical volume of publicly owned forest assortments production (Ø2013=100)

Indices of physical volume of publicly owned forest assortments production *January 2014*

MONTENEGRO (Ø2013=100)	<u>Jan-13</u> <u>Ø2013</u>	<u>Jan-14</u> <u>Ø2013</u>	<u>Jan-14</u> <u>Jan-13</u>

Production of forest assortments publicly owned *January 2014*

MONTENEGRO	2013	2014
	Jan	Jan
Coniferous	1 592	2 334
Broadleaf	214	1 265
Coniferous logs	1 068	2 026
Mining wood, coniferous	86	216
Other long coniferous wood	-	-
Cord coniferous wood	438	81
Broadleaf logs	82	813
Cord broadleaf wood	17	-
Fuel wood - coniferous	-	11
Fuel wood - hardwoods	115	452
TOTAL	1 806	3 599

m³

METHODOLOGICAL EXPLANATIONS

The report on production of forestry products is monthly submitted. The report is submitted by all enterprises producing commercial timbers in state-owned forests, no matter if the forest management is their main industry or not.

The report provides: data on produced quantity of forestry products received from regular felling of trees for the reporting month; data on produced quantity of forestry products since the beginning of year until the end of reporting month; data on sold – sent quantities of forestry products in the reporting month; data on sold quantities of forestry products since the beginning of year until the end of reporting month.

Indices of forest assortments are calculated on the basis of simple non-weighted comparison and weighted index which is used in Statistical Office of Montenegro is not comparable. This is the reason why every assortment is separately weighted. An ideal matching of these two indicators is not possible, except in the cases when the production is absolutely identical, what is in reality impossible. If there the attention was paid to weighted coefficients, i.e. on values which they represent, then there would have been possible to compare physical volume of production in the manner it is provided. But, in this way calculated index does not present neither quantitative nor qualitative changes within the volume of forest assortments.
