

Indices of physical volume of publicly owned forest assortments production *February 2014*

Production of forest assortments from state forests in Montenegro for period January – February 2014 compared with the same period of previous year increased 76.1 %.

Production of forest assortments from state forests in Montenegro in February 2014 compared to February 2013 increased 26.1 %.

Production of broadleaf logs from state forests in Montenegro in February 2014 compared to February 2013 decreased 19.3 %.

Production of hardwoods publicly owned in Montenegro for period January – February 2014 compared with same period of previous year has been increased for 1 326 m³.

Production of cord coniferous wood publicly owned in Montenegro for period January – February 2014, compared with same period of previous year has been decreased for 516 m³, i.e. for 45.1 %.

Production of fuel wood of hardwoods publicly owned in Montenegro for period January – February 2014, compared with same period of previous year has been increased for 509 m³.

METHODOLOGICAL EXPLANATIONS

The report on production of forestry products is monthly submitted. The report is submitted by all enterprises producing commercial timbers in state-owned forests. no matter if the forest management is their main industry or not.

The report provides: data on produced quantity of forestry products received from regular felling of trees for the reporting month; data on produced quantity of forestry products since the beginning of year until the end of reporting month; data on sold – sent quantities of forestry products in the reporting month; data on sold quantities of forestry products since the beginning of year until the end of reporting month.

Indices of forest assortments are calculated on the basis of simple non-weighted comparison and weighted index which is used in Statistical Office of Montenegro is not comparable. This is the reason why every assortment is separately weighted. An ideal matching of these two indicators is not possible. except in the cases when the production is absolutely identical. what is in reality impossible. If there the attention was paid to weighted coefficients. i.e. on values which they represent. then there would have been possible to compare physical volume of production in the manner it is provided. But in this way calculated index does not present neither quantitative nor qualitative changes within the volume of forest assortments.
