

## Balance of wood fuels 2020 <sup>(p)</sup>

Primary production from firewood and wood residue and chips in Montenegro in 2020 was 777 407 m<sup>3</sup>, wood pellets was 86 991 tons.

Final consumption firewood in households was 539 336 m<sup>3</sup>, in industry 40 547 m<sup>3</sup> and other sectors 21 310 m<sup>3</sup>.

**Graph 1. Firewood consumption of firewood in household sector in Montenegro, in m<sup>3</sup>**

*(p) - preliminary data*

## METHODOLOGICAL EXPLANATIONS

Balance of wood fuels contains annual data on production, import, export, transformation, consumption and distribution of wood fuels in Montenegro in 2019. Data are presented in the natural units of measure and in TJ (terajoule).

The methodology for calculation of balance of wood fuels, definitions and statistical terminology are harmonized with the international IEA/OECD/EUROSTAT standards.

### Data sources (coverage)

The reporting units for balance of wood fuels are companies engaging in the producing and selling/delivering of wood fuels and households. Balance of wood fuels also covers the data from statistical surveys in the area of energy, foreign trade, industry, transport and agriculture.

### Method of data collection

The data are processed using the compilation method.

### Definition

*Gross inland* energy consumption is calculated as follows:

Primary production  
+ Imports  
– Exports  
+ Stock changes  
– Marine bunkers

*Transformation - input* is the consumption of fuels as raw materials for energy production in thermal power plants, CHP, auto producers, district heating plants, refineries, blast furnace plants and coal transformation.

*Transformation - output* covers the production of transformed energy forms (thermoelectricity, heat, petroleum products, blast furnace gas and oxygen steel furnace gas).

*Exchange and transfers* include inter product transferred (distillates), products transferred (hydro energy) and recycled products (naphtha, fuel oil and lubricants).

*Own consumption in energy sector* covers the energy used for energy sector running.

*Distribution losses* include losses incurred in transmission and distribution of energy.

Energy available for final consumption is the energy intended for final consumers.

Final consumption of energy covers final consumption of available energy for energy purposes in:

- industry (iron and steel, non-ferrous metal, chemical industry, non-metal minerals, mining and quarrying, food, drink and tobacco industry, textile, leather and clothing, paper and printing, engineering and other metal industry, other industries);
- transport (rail, road, air, inland, other);
- households, agriculture and other sectors (e.g. education, health, administration, etc.).

*Fuel wood* is wood used directly for heating or production of charcoal.

*Wood pellet* is fuel made from wood mass compressed and extruded through a die. The starting raw material often represents large or small (sawdust) residues from mechanical processing of wood.

*Wood briquette* is wood biofuel of prismatic or cylindrical form obtained from compressing extruded wood material in appropriate presses.

*Charcoal* is a wood residue from mechanical processing of wood products.

## Conversion Equivalents between Units of Energy

Conversion factors for converting energy into various energy units are published in the Manual of Energy Statistics IEA / OECD / Eurostat.

Conversion refers to particular energy unit are shown in Table:

	<b>TJ</b>	<b>Gcal</b>	<b>Mtoe</b>	<b>GWh</b>
<b>TJ</b>	1	238,8	$2,388 \times 10^{-5}$	0.2778
<b>Gcal</b>	$4,1868 \times 10^{-3}$	1	$10^{-7}$	$1,163 \times 10^{-3}$
<b>Mtoe</b>	$4,1868 \times 10^{-4}$	$10^7$	1	11630
<b>GWh</b>	3,6	860	$8,6 \times 10^{-5}$	1

### Unit of measure:

TJ = terajoule  
Gcal = gigacalorie  
Mtoe = milion tones of oil equivalent  
GWh = gigawatt hour  
t = tonne

### Znaci:

- = no occurrence of event  
... = data not available  
0 = value less than 0,5 of the unit of measure  
1) = footnote

It may happen that the total sum does not match the number of individual data, and that the cumulative data is not always equal to the sum of individual quarterly results due to rounding of numbers.
