## Balance of oil products 2020

Total final consumption of oil products in Montenegro in 2020 was 330.2 thousand tons, of which was consumed in transport sector 223.4 thousand tons, in industry 59.0 thousand tons, in other sectors was consumed 12.6 thousand tons and non-energy consumption of oil products was 35.2 thousand tons.

In total consumption of oil products in 2020 the ratio of transport was $67.7 \%$, industry $17.8 \%$, ratio of other sectors was $3.8 \%$ and non-energy consumption was $10,7 \%$. Total import of oil products in Montenegro in 2020 was 324.6 thousand tons.

Graph 1. Final consumption of oil products in Montenegro, in thous. tons

## METHODOLOGICAL EXPLANATIONS

Bilance of oil products contains annual data on import, export, transformation, consumption and distribution of oil products in Montenegro in 2020. Data are presented in the natural units of measure and in TJ (terajoule).

The methodology for calculation of balance of oil products, definitions and statistical terminology are harmonized with the international IEA/OECD/EUROSTAT standards.

## Data sources (coverage)

The reporting units for balance of oil products are companies engaging in trade of oil products. Balance of oil products also covers the data from statistical surveys in the area of energy, foreign trade, industry, transport and agriculture.

## Method of data collection

The data are processed using the compilation method.

## Definition

Primary production is a form of energy that has not been converted or transformed (coal, oil, natural gas, biomass, firewood, hydro power energy, geothermal energy, wind energy and solar energy).

Imports and exports cover quantities that crossed the national border.
Marine bunkers cover the quantities delivered for international navigation purposes.
Statistical differences are a category that includes the sum of unknown statistical differences between the production and consumption of selected fuels.

Gross inland energy consumption is calculated as follows:
Primary production

+ Imports
- Exports
+ Stock changes
- Marine bunkers

Transformation - input is the consumption of fuels as raw materials for energy production in thermal power plants, CHP, auto producers, district heating plants, refineries, blast furnace plants and coal transformation.

Transformation - output covers the production of transformed energy forms (thermoelectricity, heat, petroleum products, blast furnace gas and oxygen steel furnace gas).

Exchange and transfers include inter product transferred (distillates), products transferred (hydro energy) and recycled products (naphtha, fuel oil and lubricants).
Own consumption in energy sector covers the energy used for energy sector running.
Distribution losses include losses incurred in transmission and distribution of energy.
Energy available for final consumption is the energy intended for final consumers.
Final consumption of energy covers final consumption of available energy for energy purposes in:

- industry (iron and steel, non-ferrous metal, chemical industry, non-metal minerals, mining and quarrying, food, drink and tobacco industry, textile, leather and clothing, paper and printing, engineering and other metal industry, other industries);
- transport (rail, road, air, inland, other);
- households, agriculture and other sectors (e.g. education, health, administration, etc.).

## Conversion Equivalents between Units of Energy

Conversion factors for converting energy into various energy units are published in the Manual of Energy Statistics IEA / OECD / Eurostat.

Conversion refers to particular energy unit are shown in Table:

|  | TJ | Gcal | Mtoe | GWh |
| :--- | :---: | :---: | :---: | :---: |
| TJ | 1 | 238,8 | $2,388 \times 10^{-5}$ | 0.2778 |
| Gcal | $4,1868 \times 10^{-3}$ | 1 | $10^{-7}$ | $1,163 \times 10^{-3}$ |
| Mtoe | $4,1868 \times 10^{-4}$ | $10^{7}$ | 1 | 11630 |
| GWh | 3,6 | 860 | $8,6 \times 10^{-5}$ | 1 |

```
Unit of measure:
TJ = terajoule
Gcal = gigacalorie
Mtoe = milion tones of oil equivalent
GWh = gigawatt hour
t = tonne
```

Znaci:

- = no occurence of event
... = data not available
(0) = statistics irelevant data (small data value)

1) = footnote

It may happen that the total sum does not match the number of individual data, and that the cumulative data is not always equal to the sum of individual quarterly results due to rounding of numbers.
