Preliminary data

## Balance of oil products

## 2021

Total final consumption of oil products in Montenegro was 408.2 thousand of tonnes in 2021, out of which the consumption was in: transport sector 296.9 thousand of tonnes; industry 63.6 thousand of tonnes; other sectors 15.2 thousand of tonnes; while non-energy consumption of oil products was 32.5 thousand of tonnes.

In total consumption of oil products in 2021, there was a share of: transport $72.7 \%$; industry $15.6 \%$; other sectors $3.7 \%$; and non-energy consumption $8.0 \%$. Total import of oil products in Montenegro in 2021 was 420.9 thousand of tonnes.

## METHODOLOGICAL NOTES

Balance of oil products contains annual data on import, export, transformation, consumption, and distribution of oil products in Montenegro in 2021. The data are presented in the natural units of measure, and in TJ (terajoule).
Methodology for calculation of balance of oil products, definitions, and statistical terminology are harmonized with the international IEA/OECD/EUROSTAT standards.

## Data sources (coverage)

The reporting units for balance of oil products are companies engaged in trade of oil products. Balance of oil products also covers the data from statistical surveys in the area of energy, foreign trade, industry, transport, and agriculture.

## Method of data collection

The data are processed using the compilation method.

## Definition

Primary production is a form of energy that has not been converted or transformed (coal, oil, natural gas, biomass, firewood, hydro power energy, geothermal energy, wind energy and solar energy).

Imports and exports cover quantities that crossed the national border.

Marine bunkers cover the quantities delivered for international navigation purposes.

Statistical differences are a category that includes the sum of unknown statistical differences between production and consumption of selected fuels.

Gross inland energy consumption is calculated as it follows:

## Primary production

+ Imports
- Exports
+ Stock changes
- Marine bunkers

Transformation - input is the consumption of fuels as raw materials for energy production in thermal power plants, CHP, auto producers, district heating plants, refineries, blast furnace plants, and coal transformation.

Transformation - output covers the production of transformed energy forms (thermoelectricity, heat, petroleum products, blast furnace gas, and oxygen steel furnace gas).

Exchange and transfers include inter product transferred (distillates), products transferred (hydro energy), and recycled products (naphtha, fuel oil and lubricants).

Own consumption in energy sector covers the energy used for energy sector running.

Distribution losses include losses incurred in transmission and distribution of energy.

Energy available for final consumption is the energy intended for final consumers.

Final consumption of energy covers final consumption of available energy for energy purposes in:

- Industry (iron and steel, non-ferrous metal, chemical industry, non-metal minerals, mining and quarrying, food, drink and tobacco industry, textile, leather and clothing, paper and printing, engineering and other metal industry, other industries);
- Transport (rail, road, air, inland, other);
- Households, agriculture and other sectors (e.g. education, health, administration, etc.).

Final consumption of energy is calculated as it follows:
Gross domestic consumption of energy

+ Transformations
+ Changes and transfers, reverse flows
- Own consumption in energy sector
- Energy distribution and transmission losses

## Conversion Equivalents between Units of Energy

Conversion factors for converting energy into various energy units are published in the Manual of Energy Statistics IEA / OECD / Eurostat.

The conversion referring to particular energy unit are shown in the table:

|  | TJ | Gcal | Mtoe | GWh |
| :--- | ---: | ---: | ---: | ---: |
| TJ | 1 | 238.8 | $2.388 \times 10^{-5}$ | 0.2778 |
| Gcal | $4.1868 \times 10^{-3}$ | 1 | $10^{-7}$ | $1.16 \times 10^{-3}$ |
| Mtoe | $4.1868 \times 10^{-4}$ | $10^{7}$ | 1 | 11630 |
| GWh | 3.6 | 860 | $8.6 \times 10^{-5}$ | 1 |

$$
\begin{aligned}
& \text { Unit of measure: } \\
& \begin{array}{ll}
\mathrm{TJ} \quad=\text { terajoule } \\
\text { Gcal } & =\text { gigacalorie } \\
\text { Mtoe } & =\text { milion tones of oil equivalent } \\
\mathrm{GWh} & =\text { gigawatt hour } \\
\mathrm{t} & =\text { tonne }
\end{array}
\end{aligned}
$$

## Symbol:

- = no occurence of event
... = data not available
( 0 ) = statistics irelevant data (small data value)

1) = footnote

It may happen that the total sum does not match the number of individual data due to rounding of numbers.

When using the data, state: "Data source: Statistical Office of Montenegro - MONSTAT"

More information, as well as detailed methodological explanations can be found in the section: Balance of oil products
