<b>Non-durable consumer goods</b>	101.0	100.3	100.7	100.8

## METHODOLOGICAL NOTES

Price indices of industrial products which are calculated based on prices collected from domestic producers realized on the domestic market serve as one of the main short-term indicators in economic analysis and views.

Selling price of manufactured products is the price at which the manufacturer sells to regular customers in the domestic market in large quantities. Price is without value added tax.

Sample and weights are based on annual industry survey. Manufacturers have been selected as the largest manufacturers of product categories that are included in the study.

The data are published on the 15th in a month for the previous one as well as on our website [www.monstat.org](http://www.monstat.org).

According to the [Revision policy](#) of the Statistical Office, the **final** data shall be published with the date defined by the Statistical Release Calendar.

### **Special aggregates:**

**Energy** – Includes activities of extraction, production, processing and distribution of energy.

**Intermediate goods** – Include products that are final product of manufacturing process, but can also be used as an input to other production processes.

**Capital goods** – Include heavy equipment which require relatively large investments, and are purchased for use over a long period of time.

**Durable consumer goods** – Include products for the mass market and are intended to last for several years.

**Non-durable consumer goods** – Include products for mass consumption, purchased by consumers for daily or frequent use.

Since January 2018, the index reference period for the calculation of Producer price index is 2015=100. This methodological change is at the same time a request from Eurostat, and it refers to all short-term statistics.
