

RELEASE 111-2/2025

Release date:
22 October 2025

Producer price indices

The second quarter 2025

Prices of industrial products produced in Montenegro in the second quarter of 2025 compared with second quarter of 2024 increased for 1.1%. Observing the sectors of Classification of activities 2010, compared with second quarter of 2024, sector *Mining and quarrying* decreased for 2.1%, sector *Manufacturing* increased for 2.8%, while the prices in sector *Electricity, gas, steam and air conditioning supply* in average remained stable compared with second quarter of 2024.

Prices of industrial products produced in Montenegro in the second quarter of 2025 compared with first quarter of 2025 decreased for 0.4%. Observing the sectors of Classification of activities 2010, compared with first quarter of 2025, sector *Mining and quarrying* decreased for 3.0%, sector *Manufacturing* increased for 0.4%, while the prices in sector *Electricity, gas steam and air conditioning supply* in average remained stable compared with first quarter of 2025.

Graph 1. Growth rate of producer prices, in %

- ❖ **Annual growth rate** – change in prices in a current quarter compared with the same quarter of the previous year, in %.
- ❖ **Quarterly growth rate** – change in prices in a current quarter compared with the previous quarter, in %.

Non-durable consumer goods	102.8	100.5	102.9	103.4

METHODOLOGICAL NOTES

Price indices of industrial products which are calculated based on prices collected from domestic producers realized on the domestic market, are used as one of the main short-term indicators in economic analysis and views.

Selling price of manufactured products is the price at which the manufacturer sells their products to customers on domestic market in large quantities. The price does not include value added tax (VAT).

Statistical Business Register (SBR) is used as the frame for the coverage for the purposes of this survey. Reporting units for calculation of producer price indices are businesses engaged in the industrial production (sectors B, C and D of [Classification of activities 2010](#), which substantially and structurally fully corresponds to NACE Rev.2), as well as parts of commercial businesses classified into other sectors of Classification of activity, which satisfy the criteria for this survey. Sample and weights are based on annual Industrial production survey (PRODCOM). Manufacturers have been selected as the largest manufacturers of product categories that are included in the survey.

Special aggregates:

Energy – Includes activities of extraction, production, processing and distribution of energy.

Intermediate goods – Include products that are final product of manufacturing process, but can also be used as an input to other production processes.

Capital goods – Include heavy equipment which require relatively large investments, and are purchased for use over a long period of time.

Durable consumer goods – Include products for the mass market and are intended to last for several years.

Non-durable consumer goods – Include products for mass consumption, purchased by consumers for daily or frequent use.

Since January 2024, the index reference period for the calculation of Producer price index is 2021=100. This methodological change is at the same time a request from Eurostat, and it refers to all short-term statistics.

The last published data are considered **preliminary**, and becomes final within the defined deadline, as foreseen by the Statistical Release Calendar.

When using the data, state:

"Data source: Statistical Office - MONSTAT"

More data, as well as detailed methodological notes can be found in the section: [Producer Price Index](#)
