

## ZDRAVSTVO

### Izvori i metode prikupljanja podataka

Podaci o zdravstvenim ustanovama, odnosno organizacionim jedinicama, radnicima i radu prikupljaju se godišnjim izvještajima za pojedine vrste zdravstvenih službi, koje one dostavljaju prema uputstvima za sastavljanje izvještaja. Podaci o zaraznim bolestima prate se na osnovu prijave o obolijavanju od zaraznih bolesti, koje se dostavljaju Službi epidemiologije.

Oboljenja i stanja utvrđena u službi opšte medicine i specijalističkoj službi data su po specijalno utvrđenoj listi oboljenja, u skladu sa Međunarodnom klasifikacijom bolesti.

### Obuhvat

Rad i morbiditet se odnose na cijelu kalendarsku godinu, a kadrovi se iskazuju sa stanjem na dan 31. decembra.

Podaci o kadrovima u zdravstvu su potpuni, s obzirom na to da su obuhvaćene sve zdravstvene organizacije.

Prijavljivanje zaraznih bolesti regulisano je Odlukom o načinu prijavljivanja zaraznih bolesti.

### Definicije

*Služba* je zdravstvena ustanova ili dio zdravstvene ustanove, i pruža zdravstvenu zaštitu određenim grupacijama stanovništva (žene, djeca, radnici), ili obezbjeđuje zdravstvenu zaštitu od pojedinih oboljenja (TBC, dijabetes i dr.).

Služba je tako organizovana da pored kurativnih pruža i preventivnu zaštitu stanovništva, i u svom sastavu ima više organizacionih jedinica, na primjer: ambulantu, savjetovanište, patronažu i drugo. Po pravilu, služba ima bar jednog ljekara specijalistu koji rukovodi službom.

*Organizaciona jedinica – mjesto*, punkt je dio službe zdravstvene ustanove i teritorijalno se može nalaziti na istom mjestu gdje i zdravstvena ustanova ili na drugim mjestima. Ako se sve organizacione jedinice-punktovi nalaze na istom mjestu (ista adresa), onda se cijela služba smatra jednom organizacionom jedinicom-punktom. Ako se organizacione jedinice-punktovi nalaze na više mjesta, onda se svaka od njih smatra posebnim punktom.

*Služba za stacionarno liječenje u opštim bolnicama* prima na liječenje bolesnike od svih vrsta bolesti. One su, u organizacionom smislu, sastavljene od pojedinih odjeljenja (interno, zarazno, hirurško, itd.).

*Služba za stacionarno liječenje u specijalnim bolnicama* prima i liječi bolesnike od bolesti za koje je dotična bolnica specijalizovana (tuberkuloza pluća, kostiju, dječje bolesti, itd.).

*Bolesnički dani* su dani koje je jedno lice provelo u stacionarnoj ustanovi, radi liječenja ili ispitivanja. U broj bolesničkih dana računavaju se dani provedeni u stacionaru, uključujući i dan otpusta, a ne računava se dan prijema.

*Broj postelja* u pojedinoj vrsti specijalnih bolnica ne čini cjelokupan posteljni fond za dotičnu vrstu liječenja, već tome treba dodati i broj postelja koje se nalaze u odnosnim specijalističkim odjeljenjima službe za stacionarno liječenje u opštim bolnicama namijenjenim bolnicama za liječenje od iste vrste bolesti.

*Posjeta* je svaki kontakt pojedinca sa ljekarom ili sa drugim zdravstvenim radnikom u zdravstvenoj ustanovi, kući ili na drugom mjestu, radi ostvarivanja zdravstvene zaštite.

*Posjeta ljekaru zbog oboljenja*, stanja ili povrede je kontakt koji pojedinac učini sa ljekarom zbog nekog oboljenja, stanja ili povrede. Ova posjeta može biti „prva“, ili „ponovna“.

## HEALTH

### Sources and methods of data collection

Data on health facilities, that are organizational units, employed persons and activities are collected through annual reports for certain types of health services, submitted according to instructions for report writing. The data on communicable diseases are confirmed and provided by the service of epidemiology of the Institute of Public Health according to their reports.

Diagnoses by general practitioners and specialists are made according to a special standard list of diseases based on the International Classification of Diseases.

### Coverage

Figures on activities and morbidity relate to the whole calendar year, while data on staff refer to the situation as on 31 December.

Data on human resources in public health are complete since all health care units are covered.

Reporting of communicable diseases is regulated by Declaration of reporting communicable diseases.

### Definitions

*Health service* is a public health institution or a part of health institution providing health care to certain groups of population (women, children, workers) or providing health care against certain diseases (tuberculosis, diabetes, etc.).

Health service provides both curative and preventive consultations and incorporates more than one organizational unit, such as: outpatient departments, consultation centres, visiting-nurse service, etc. As a rule, a service has at least one physician specialist managing the service.

*Organizational unit - station* is a part of a public health institution, and territorially can be located at the same place where a public health institution is, or elsewhere. If all organizational units - stations are at the same location (with the same address) then the whole service is considered as one organizational unit - station. If organizational units - stations are located at several places, then each is considered as a separate unit/station.

*In-patient stationary treatment in general hospitals* provides treatment against all kinds of diseases. By organizational principle, they are composed of several departments (Department of Internal Medicine, Infectious/Contagious Diseases Department, Surgical Department, etc.).

*In-patient stationary treatment service in special hospitals* provides treatment against a specific disease (pulmonary tuberculosis, bones diseases, children's diseases, etc.).

*Hospitalization days* are days a person has spent in stationary institution, for treatment or medical examinations. These include days actually spent in a given stationary unit as well as a release day, while admittance day is excluded.

*Number of beds* in a certain specialized hospital does not represent the total number of beds available for certain type of treatment, since the number of beds in corresponding specialists' departments for in-patient treatment of general hospitals should be added.

*A visit* is every contact of an individual with a physician or another health worker in a health institution, at home or elsewhere for health care purposes.

*A visit to a physician due to disease, state or injury* is a contact with a physician due to aforementioned reasons. This visit may be the "first" one or "repeated" one.

*Prva posjeta* je kontakt koji pojedinac prvi put učini sa ljekarom zbog nekog oboljenja, stanja ili povrede.

*Ponovne posjete* su sve ostale posjete u vezi sa oboljenjem, stanjem ili povredom, do konačnog ishoda.

*Prva posjeta ljekaru u savjetovalištu službe za zdravstvenu zaštitu žena* smatra se ona koju je trudna žena učinila prvi put tokom jedne trudnoće.

*Kao prva posjeta ljekaru u dječijem savjetovalištu* smatra se ona kada je dijete prvi put došlo u zdravstvenu ustanovu i za njega popunjen dječiji karton.

*The first visit* is a contact with doctor made for the first time due to some disease, state or injury.

*The repeated visit* include all further visits related to the disease, state or injury, until the final outcome

*The first visit to a doctor in a consultation centre of health care for women* is a visit made for the first time by a pregnant woman during the same pregnancy.

*The first visit to a doctor in children's consultation centre* is the first visit of a child to a health institution when opening his/her health care record.
