METHODOLOGICAL NOTES

Retail trade statistics include and show the turnover of companies whose main activity is retail trade (area 47 NACE Rev2), as well as companies (KAU) whose business units are engaged in retail trade.

The source of data for the implementation of the Turnover index in retail trade survey is turnover data from VAT returns (jurisdiction of the Tax Administration) on day 24 April 2026.

Turnover of goods in retail trade represents the value of goods sold by the company that is sold to final consumers, i.e., the population for personal consumption and household use, as well as legal and natural persons to perform activities.

Indices of turnover of goods in constant prices are obtained by deflating the index in current prices by appropriate indices of retail goods prices.

Data are published according to the [Statistical Release Calendar](#).

The last published data are considered preliminary, and becomes final within the defined deadline, as foreseen by the Statistical Release Calendar.

When using the data, state:

"Data source: Statistical Office - MONSTAT"
