METHODOLOGICAL NOTES

Retail trade statistics include and show the turnover of companies whose main activity is retail trade (area 47 NACE Rev2), as well as companies (KAU) whose business units are engaged in retail trade.

The source of data for the implementation of the Turnover index in retail trade survey is turnover data from VAT returns (jurisdiction of the Tax Administration) as of 22 October 2026.

Turnover of goods in retail trade represents the value of goods sold by enterprises to final consumers, i.e., the population for personal consumption and household use, as well as legal and natural persons to perform activities.

Indices of turnover of goods in constant prices are obtained by deflating the index in current prices by appropriate retail prices indices.

Data are published according to the [Statistical Release Calendar](#).

According to the Revision policy of the Statistical Office, the final data shall be published with the date defined by the Statistical Release Calendar.

When using the data, state:

"Data source: Statistical Office - MONSTAT"
