METHODOLOGICAL NOTES

The survey aims to measure the dynamics of turnover in service activities. The dynamics of turnover are shown through index numbers.

Turnover includes the monetary value of services performed or provided on the market in the reporting quarter, excluding value-added tax.

The source of data for the implementation of the Turnover index in services is turnover data from VAT returns under the jurisdiction of the Tax Administration, with the balance as of July 22, 2026.

The coverage is based on EU Regulation 2019/2152 on short-term statistics, including its amendments, and is fully aligned with its concepts and definitions.

All active companies that have submitted a VAT return to the competent authority are covered, as are parts of business companies (KAU) that engage in service activities.

Total turnover in service activities refers to companies whose main activities are in the field of services listed in Table 2.

Data are published according to the [Statistical Release Calendar](#).

The last published data are considered preliminary and become final within the defined deadline, as foreseen by the Statistical Release Calendar.
