Harmonised Index of Consumer Prices (HICP)
March 2018(p)

Monthly inflation in March 2018, measured by HICP was 0.2%

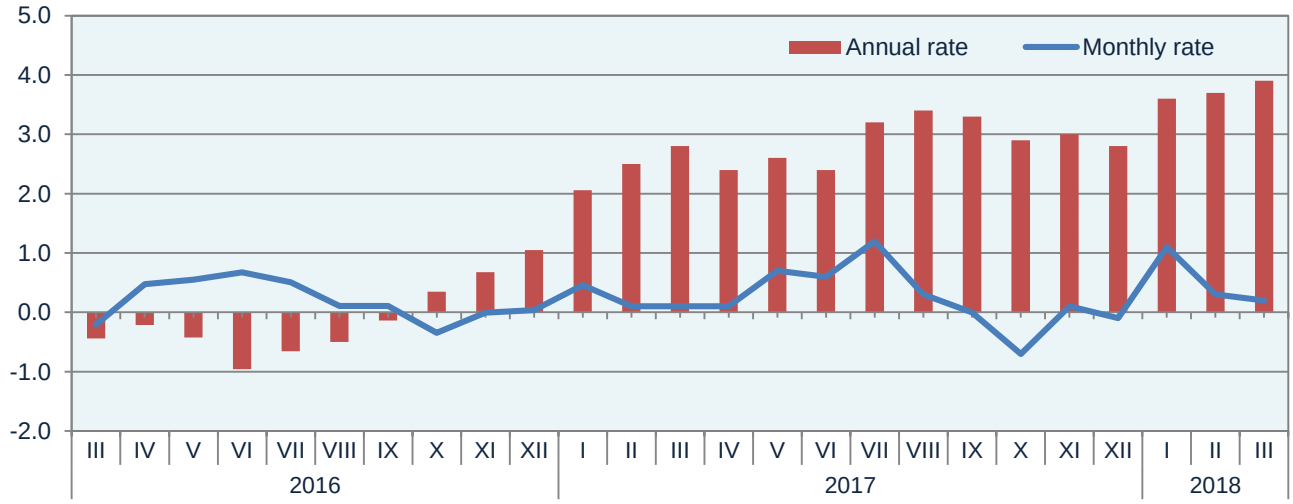
Monthly inflation measured by Harmonised index of consumer prices was 0.2% in March 2018, while the annual inflation was 3.9%. This was influenced mostly by increase in prices of: vegetables; garments; non-durable household goods; fruit; shoes and other footwear; meat; milk, cheese and eggs; restaurants, cafes and the like.

Observing the main groups monthly growth of prices was noticed in the following groups: Clothing and footwear (1.7%); Furnishing, household equipment and routine household maintenance (0.7%); Food and non-alcoholic beverages (0.4%); Miscellaneous goods and service (0.2%), while a drop of prices was recorded in the following groups: Transport (-0.3%); Housing, water, electricity, gas and other fuels (-0.2%); Restaurants and hotels (-0.2%).

Prices of other products and services mostly remained unchanged.

Positive annual inflation rates in March 2018 were observed in the following groups: Alcoholic beverages and tobacco (27.6%); Clothing and footwear (7.0%); Restaurants and hotels (6.2%); Transport (3.9%); Furnishing, household equipment and routine household maintenance (2.3%); Communications (1.8%); Miscellaneous goods and service (1.7%); Housing, water, electricity, gas and other fuels (1.4%); Recreation and culture (0.4%); Health (0.3%), while negative annual inflation rate was observed in group Food and non-alcoholic beverages (-0.6%).

Chart 1. Annual and monthly rates of inflation (HICP)



(p) - Preliminary data

Table 1. Inflation rates measured by Harmonised Index of Consumer Prices, in %

	Name	Weights ‰	Mar 2018 Ø 2015	Mar 2018 Feb 2018	Mar 2018 Mar 2017	Mar 2018 Dec 2017
00	**HICP - total**	***1000.0***	**5.3**	**0.2**	**3.9**	**1.6**
01	Food and non-alcoholic beverages	*289.7*	1.1	0.4	-0.6	0.9

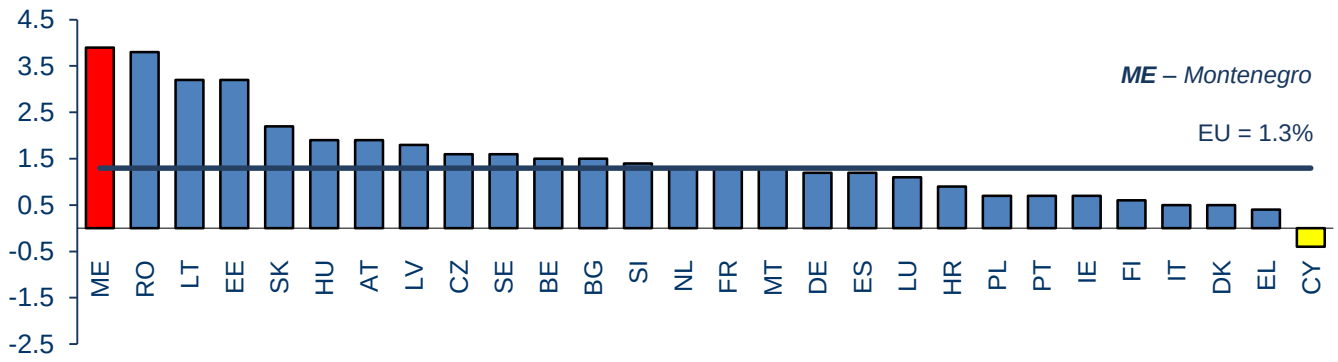
Chart 3. Annual inflation rate measured by HICP, February 2018



Euro area annual inflation rate was 1.1% in February 2018, down from 1.3% in January. In February 2017, the rate was 2.0%. **European Union** annual inflation was 1.3% in February 2018, down from 1.6% in January.

METODOLOGICAL NOTES

Harmonised Index of Consumer Prices (HICP) is the basis for comparative measurement of inflation in the European Union, and it estimates a monetary value in the Eurozone. As a difference to Consumer Index Index Price (CPI), it uses different methodological concept which is used by all EU members.

Mar 2018 month of the current year
Ø 2015 average of base year

This rate indicates a change in average prices in current month when compared with average prices in the base year.

Mar 2018 month of the current year
Feb 2018 previous month

Monthly inflation rate (current month compared with previous month) measures a change of average prices of current months compared with average prices of previous month. Monthly inflation rate can be under the influence of seasonal effects.

Mar 2018 month of the current year
Mar 2017 the same month of previous year

Annual inflation rate (month of the current year compared with the same month of previous year) measures a change in average prices in current month compared with average prices in the same month of previous year. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

Mar 2018 month of the current year
Dec 2017 December of the previous year

This rate indicates a change in average prices in current month compared with average prices in December of the previous year. In December this rate is equal the annual inflation rate.

The influence of certain groups on inflation rate indicates how much that certain group has influenced on the total inflation rate. The influence depends on weights and inflation rate of given group. The weights represents a relative share of household consumption of certain groups or subgroup of products in the total consumption. Consequently, weights have an important role in the calculation of inflation rate. They represent "importance" of certain product group in the total household consumption in certain reference period. For example, if during certain month prices of bread increases for 10%, this will influence for approx. 0.5 percenatge points (10*5%=0.5 percentage pionts - since the share of bread in the total expenses is 5%). But, if the prices of medicaments increase 12%, this will increase the inflation for 0.06 percentage points (12*0.5%=0.06 percentage points - since the share of medicaments in the total expenses 0.5%). This simple example indicates how much large influence have weights on the final number presenting the inflation. Summing up the influence in percentage points of all subgroups the final result should equal the all-items index rate of change in percentage.

The last published data are considered **preliminary**, and becomes final within the defined deadline, as forseen by the Statistical Release Calendar.
