Harmonised Index of Consumer Prices (HICP)
September 2018

Monthly inflation in September 2018, measured by HICP was -0.9%

Monthly inflation measured by Harmonised index of consumer prices was -0.9% in September 2018, while the annual inflation was 1.7%. This was influenced mostly by decrease in prices of: accommodation services; tobacco; vegetables; fruit; dental services; household textiles.

Observing the main groups monthly drop of prices was noticed in the following groups: Alcoholic beverages and tobacco (-6.7%); Restaurants and hotels (-3,7%); Food and non-alcoholic beverages (-0.7%); Health (-0.7%); Communications (-0.1%); Recreation and culture (-0.1%), while a growth of prices was recorded in the following groups: Clothing and footwear (7.3%); Housing, water, electricity, gas and other fuels (1.4%); Miscellaneous goods and service (0.5%); Transport (0.3%).

Prices of other products and services mostly remained unchanged.

Positive annual inflation rates in September 2018 were observed in the following groups: Alcoholic beverages and tobacco (6.3%); Transport (5.0%); Housing, water, electricity, gas and other fuels (2.2%); Restaurants and hotels (1.7%); Communications (1.1%); Miscellaneous goods and service (1.0%); Food and non-alcoholic beverages (0.9%); Furnishing, household equipment and routine household maintenance (0.7%), while negative annual inflation rates were observed in the following groups: Recreation and culture (-0.7%); Health (-0.5%); Clothing and footwear (-0.2%).

Chart 1. Annual and monthly rates of inflation (HICP)

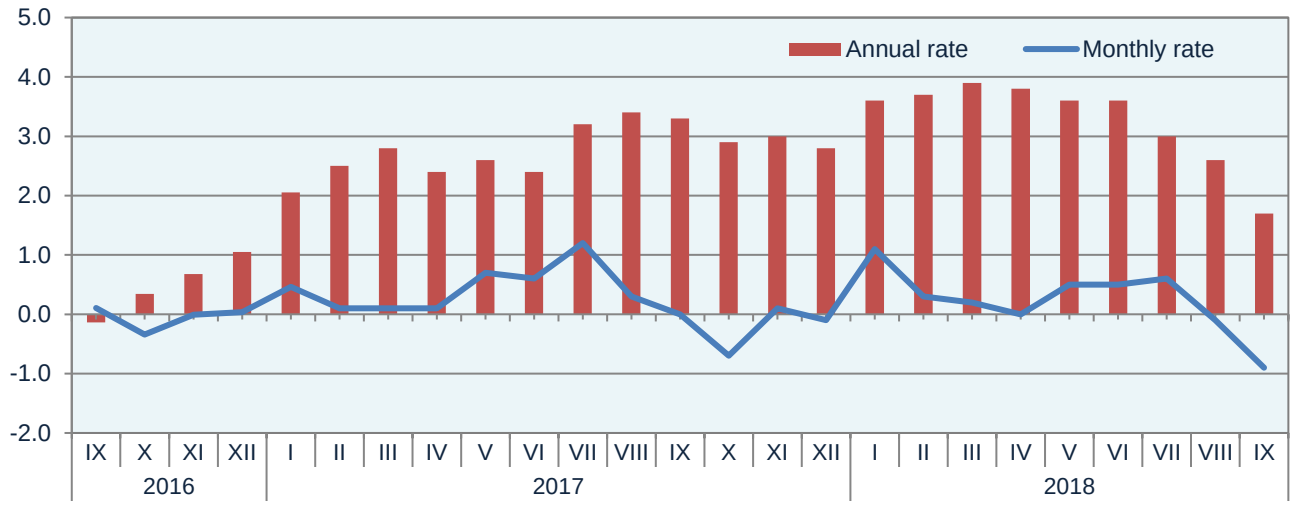

Table 1. Inflation rates measured by Harmonised Index of Consumer Prices, in %

	Name	Weights ‰	Sep 2018 Ø 2015	Sep 2018 Aug 2018	Sep 2018 Sep 2017	Sep 2018 Dec 2017
00	**HICP - total**	***1000.0***	**6.1**	**-0.9**	**1.7**	**2.4**

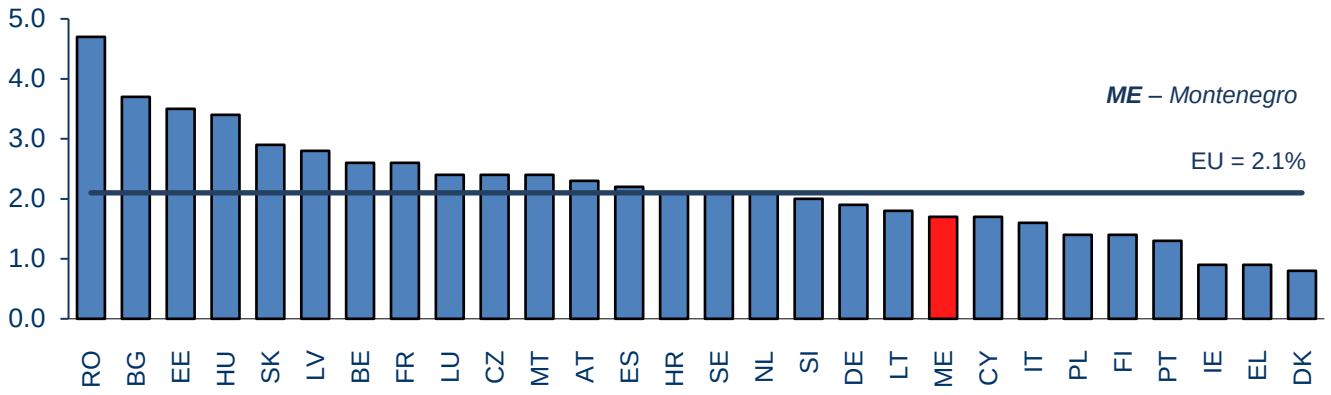
Chart 3. Annual inflation rate measured by HICP, August 2018



Euro area annual inflation rate was was 2.0% in August 2018, down from 2.1% in July 2018. **European Union** annual inflation was 2.1% in August 2018, down from 2.2% in July 2018.

METODOLOGICAL NOTES

Harmonised Index of Consumer Prices (HICP) is the basis for comparative measurement of inflation in the European Union, and it estimates a monetary value in the Eurozone. As a difference to Consumer Index Index Price (CPI), it uses different methodological concept which is used by all EU members.

Sep 2018 month of the current year
Ø 2015 average of base year

This rate indicates a change in average prices in current month when compared with average prices in the base year.

Sep 2018 month of the current year
Aug 2018 previous month

Monthly inflation rate (current month compared with previous month) measures a change of average prices of current months compared with average prices of previous month. Monthly inflation rate can be under the influence of seasonal effects.

Sep 2018 month of the current year
Sep 2017 the same month of previous year

Annual inflation rate (month of the current year compared with the same month of previous year) measures a change in average prices in current month compared with average prices in the same month of previous year. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

Sep 2018 month of the current year
Dec 2017 December of the previous year

This rate indicates a change in average prices in current month compared with average prices in December of the previous year. In December this rate is equal the annual inflation rate.

The influence of certain groups on inflation rate indicates how much that certain group has influenced on the total inflation rate. The influence depends on weights and inflation rate of given group. The weights represents a relative share of household consumption of certain groups or subgroup of products in the total consumption. Consequently, weights have an important role in the calculation of inflation rate. They represent "importance" of certain product group in the total household consumption in certain reference period. For example, if during certain month prices of bread increases for 10%, this will influence for approx. 0.5 percenatge points (10*5%=0.5 percentage pionts - since the share of bread in the total expenses is 5%). But, if the prices of medicaments increase 12%, this will increase the inflation for 0.06 percentage points (12*0.5%=0.06 percentage points - since the share of medicaments in the total expenses 0.5%). This simple example indicates how much large influence have weights on the final number presenting the inflation. Summing up the influence in percentage points of all subgroups the final result should equal the all-items index rate of change in percentage.

According to the Revision policy of the Statistical Office, the **final** data shall be published with the date defined by the Statistical Release Calendar.
