## Indices of industrial production December 2012

Industrial production in Montenegro in December increased 17.0\% compared to same month of the previous year, 15.3 \% compared with the previous month, $8.8 \%$ compared to average monthly production from previous year, while it decrease $7.1 \%$ for period January-December 2012 compared with the same period of previous year.

At the sector level, period January-December 2012 compared to the same period of the previous year, there was an decrease in the production in two sectors: mining and quarrying $21.0 \%$ and manufacturing $10.1 \%$. while it increased in sector electricity, gas, steam and air conditioning supply $1.4 \%$ for the observed period.

## Growth rates of industrial production

## Indices of physical volume of industrial production December 2012.

## METHODOLOGICAL EXPLANATIONS

Industrial production indices are one of the most important short-term indicators and a basis for decision making in the area of economy.

Monthly report on industry IND-1 provides the data on industrial production (quantity of products produced in the reporting month, from beginning to the end of reporting month, quantities of final products in stocks, sale of final products from beginning to the end of reporting month, value of production in reporting month, number of workers, gross earnings of employees, number of hours worked, value of stock, profit from sale turnover).

Statistical Business Register (SBR) is used as the frame for the coverage for the purposes of this survey. Reporting units are businesses engaged in the industrial production (sectors B,C and D of Activity Classification), as well as parts of commercial businesses classified into other sectors of Activity Classification, and they satisfy the criteria for this survey.

The data are published on the $15^{\text {th }}$ in a month for the previous one, as well as in our website www.monstat.org.
