Producer of the official statistics: Statistical Office of Montenegro - MONSTAT

Organizational unit: Department for Macroeconomic Statistics and National Accounts

Name of the survey: Calculation of quarterly gross domestic product by expenditure approach using the direct approach

Level of publishing data: Montenegro

Publishing periodicity: Quarterly

Source of data: Administrative source - Statistical Office of Montenegro - MONSTAT, Ministry of Finance, Central Bank of Montenegro, Customs Administration

Deadline for data collection: Quarterly: 50 days after the end of reference quarter

Deadline for publishing data: Quarterly: 1st quarter - 1 July 2016; 2nd quarter - 30 September 2016; 3rd quarter - 30 December 2016; 4th quarter - 31 March 2017

Research method: Compilation

Connection with the European Statistics: Priority area 04, Module 04.1.21

Development of activities in accordance with the Programme of official statistics 2014 - 2018 year: 2.02. Quarterly accounts

Aim of the survey:

The aim of quarterly calculation of GDP by production and expenditure approach is to provide the main macroeconomic aggregate in the national accounts - NA system. Applying this approach it is possible to observe establishment of main relation on which the NA are based, in other words, that total value of available goods and services (supply) must be equal to total value of spent goods and services (use) in the observed period at the total economy value. Quarterly gross domestic product by expenditure approach is calculated as the sum of household consumption, government consumption, investment, changes in inventories and net exports of goods and services.

Deadline for publishing data: 30 September of current year for previous year

Research method: Compilation

Connection with the European Statistics: Priority area 04, Module 04.1.21

Development of activities in accordance with the Programme of official statistics 2014 - 2018 year: 2.01. Annual economic accounts

Aim of the survey:

The aim of calculation of GDP (GDP) by expenditure approach is to obtain the basic and most important macroeconomic aggregates in the national accounts system. By applying this method of calculating considers the establishment of basic relations which are based on national accounts, and that is that the total value of available goods and services (supply) must be equal to the total value of goods and services consumed (used) in the observed period at the total economy. GDP by expenditure approach is calculated as the sum of household consumption, government consumption, investment, changes in inventories and net exports of goods and services.

Financial resources required for the implementation of statistical survey: 24041.05 EUR
